McCrilla "I"

Well No. 1 is located 920 ft. from N line and 970 ft. from E line of sec. 20

20 20 20 20 20
(36 Sec. and Sec. No.) (Twp.) (Range) (Meridian)

Undesignated Pictured Cliff McCrilla New Mexico
(Field) (County or Subdivision)

The elevation of the derrick floor above sea level is 744 ft.

ILLECIBLE

DETAILS OF WELL

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Total Depth 6223'. 16" Casing at 317' with 390 cc cement, 10-3/4" Casing at 4190' with 200 cc cement. No other casing placed in well. As a result of junk hole, we propose to plug and abandon the above well in the following manner: Set squeeze retainer in 10-3/4" Intermediate Casing at 2000' & squeeze partial casing with 195 cc cement. 5 cc cement placed on top of squeeze Plug. Filled hole with mud latex fluid & spotted 10 cc cement plug in top of 16" Surface Casing & corrected regulation instrument.

Have junked hole due to inability to proceed thru partial 10-3/4" Intermediate Casing & recover stuck drill pipe & bit on bottom.

Magnolia Petroleum Company representative in Farmington has discussed above plugging program with U.S.G.A. Office at Farmington, New Mexico.

I understand that this plan of work must receive approval in writing by the Geological Survey before operation may be commenced.
