## NORTHWEST NEW MEXICO PACKER LEAKAGE TEST INSTRUCTIONS

Date

1. A paoter lealings test shall be committed on each multiply completed well within seven days after actual completion of the well, and annually themselve as personned by the order authorizing the multiple completion. Such tests shall also be commented on all multiple completions within seven days following recompletions and/or chamical or frac-ture treatment, and whomever roundial work has been done on a well during which the paster or the tubing have been disturbed. Tests shall also be salum at any time that communication is suspensed or when required by the Division.

IDEPUTY OIL A GAS INSPECT

Title

- At least 72 hours prior to the examinations of any pacine lealings test, the operator shall notify
  the Division in writing of the exact time the test is to be commenced. Offset operators shall also be exnotified.
- 3. The pacter imings test shall commence when both zones of the dual completion are single for processrs stabilization. both zones shall remain shan-in until the well-head pressure in each last stabilized, provided however, that they need not commin star-in more than zeron days.
- 4. For flow Test No. 1, one some of the dual completion shall be produced at the moment rate of production while the other none meanine clear-in. Such test chall be continued for sowen days if the case of a gas well and for 34 hours in the case of an oil well. Note: if, on an initial peoter lealings test, a gas well is being flowed to the computers due to the look of a pipeline commention the flow period shall be three hours.
- Following completion of flow Test No. 1, the well shall again be shut-in, in accordance with Paragraph 3 above.
- Flow Test No. 2 shall be conducted even though no leak was indicated during flow Test No. 1.
   Procedure for Flow Test No. 2 is to be the same as for Flow Test No. 1

- except that the previously produced zone shall remain shat-in while the zone which was previously shat-in is produced.
- 7. Presentes for gen-some tests must be measured on each zone with a deadweight presents gauge at time inservals as follows: 3 hours tests: immediately print to the beginning of each flow-period, at fifteen minute inservals during the first hour theseof, and at hourly inservals shounder, including one presents measurement immediately prior to the flow period, at least one time during each flow period (at appreximately the midway point) and immediately prior to the conclusion of each flow period. Other presents may be taken as desired, or may be requested on wells which have previously shown questionable test date.
- 24-hour oil zone teste: all pressures, throughout the entire test, shall be continuously measured and seconded with recording pressure gauges the accuracy of which must be checked at least twice, once at the beginning and once at the end of each test, with a deadweight pressure gauge. If a well is a gas-oil or am oil-gas dani completion, the seconding gauge shall be required on the oil zone only, with deadweight pressures as required above being tulum on the gaz zone.
- 8. The results of the above described tests shall be filed in triplicate wishin 15 days after completion of the test. Tests shall be filed with the Asteo District Office of the New Mexico Oil Conservation Division of Northwest New Mexico Packer Lealings Test form Revised 10/01/78 with all dendweighs pressures indicated theseen as well as the flowing temperatures (gas zones only) and gravely and OOR (oil zones only).
