Gentlemen:

Returned herewith unapproved is your sundry notice on well No. 94 San Juan 27-5 Unit, wherein, you propose to run 1 1/2" IJ tubing in the slim hole completion. The purpose of this procedure was to permanently repair a casing leak. This procedure is not acceptable to effect a permanent repair of the suspected casing leak. It is necessary that you submit an alternate proposal to effect repair of the casing. Isolation of the leak and remedial cementing operations would seem appropriate to place the well in an acceptable status for continued producing operation.

I am aware that your proposed plan has been acceptable in the past, however, in my opinion, it is not acceptable at this time when better repairs can be made.

Sincerely yours,

James F. Sims
District Oil and Gas Supervisor
