

San Juan 28-7 Unit Well #107
Plug Back from Mesaverde
June 13, 2000

API # 300390712200

Location: T-27N, R-7W, Sec.-11, Qtr.-NE SW, 1750'FSL, 1650'FWL.

Objective

The Mesaverde formation in the San Juan 28-7 Unit Well #107 will be plugged back upon successful completion to the Mesaverde formation in the San Juan 28-7 Unit Well #124. Plug back from the Mesaverde formation will be accomplished by pumping and displacing the wellbore with 9# per gallon gelled mud below the packer and placing 200' of cement on top of the packer, as per conversation with Jim Lovato - BLM on June 13, 2000. Mesaverde production and recovery of reserves will be produced from offset well #124.

WELL DATA

TD @ 5635' PBSD @ 5635' Spud Date: 7/30/1959

Surface Casing: 10.75", 32.75#, J-55, 4 jts. Set @ 174', cemented with 180 sx.

Intermediate Casing: 7.625", 26.4#, J-55, 107 jts. Set @ 3418', TOC @ 3420' by TS.

Production Liner: 5.5", 15.5#, J-55, 54 jts. from 3358' to 5634', cemented with 450 sx, TOC unknown.

PC Production Tubing: 1.051", 1.2#, 100 jts. landed @ 3174'

MV Production Tubing: 2.375", 4.7#, J-55, SN & 23 jts. below Guiberson Model AG Packer, & 156 jts. above.

Packer: 7" Guiberson Model AG set @ 4725'

PC Perforations: 3178' – 3192'.

MV perforations: 4896' – 5552'

Formation Tops: 2340' – Ojo Alamo
