17. DESCRIBE PROPOSED OR COMPLETED OPERATIONS (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)*

A packer was set May 2, 1980 in this well to isolate a casing leak from the Mesa Verde formation for a 90 day evaluation period. It is requested that a 90 day extension be granted to further evaluate the well.

On July 30, 1980 the verbal 90 day approval ended. At this time the well had only produced for 13 days which is insufficient evaluation time. Cause for the delay in returning the well to production was that it needed to be swabbed several times to overcome formation damage. This formation damage was caused by the casing leak and the water used to kill the well during the workover operations.

Approval until Oct 30, 1980
