(NOTE: Report results of multiple completion on Well Completion or Recompletion Report and Log form.)

17. DESCRIBE PROPOSED OR COMPLETED OPERATIONS (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.) \*

This well was temporarily abandoned in 1963 in the following manner: Cut stuck tubing at 4800'. Spotted a 200 sk. cement plug in open hole (4781-5700'). Pulled tubing.

It is now intended to plug and abandon the well in the following manner: Pick up tubing work string, go in hole, tag top of cement plug and circulate hole with water.

Determine free point of the production casing by stretch method. If casing is free below the top of the Pictured Cliffs formation at 3330', shoot off and recover. Spot a 70 sk. cement plug in the open hole across the casing stub that will cover the top of the Pictured Cliffs formation.

If casing is not free near the top of the Pictured Cliffs, perforate squeeze holes at the top of the Pictured Cliffs at 3330', spot a 70 sk. cement plug and pressure displace 20 sks. of cement into the formation.

If casing is free below the base of the Ojo Alamo, shoot off and recover. Spot a 70 sk. cement plug in the open hole across the casing stub that will cover the Ojo Alamo and isolate it.

If casing is not free near the base of the Ojo Alamo, perforate squeeze holes at the base of the Ojo Alamo, spot a 60 sk. cement plug and pressure displace 20 sk. cement into the formation. If casing is not free below either the Pictured Cliffs or the Ojo Alamo, then after performing the above, shoot off above the free point and spot a 70 sk. cement plug in the open hole across the casing stub. (over)

18. I hereby certify that the foregoing is true and correct

## Instructions

**General:** This form is designed for submitting proposals to perform certain well operations, and reports of such operations when completed, as indicated, on Federal and Indian lands pursuant to applicable Federal law and regulations, and, if approved or accepted by any State, on all lands in such State, pursuant to applicable State law and regulations. Any necessary special instructions concerning the use of this form and the number of copies to be submitted, particularly with regard to local, area, or regional procedures and practices, either are shown below or will be issued by, or may be obtained from, the local Federal and/or State office.

**Form 4:** If there are no applicable State requirements, locations on Federal or Indian land should be described in accordance with Federal requirements. Consult local State or Federal office for specific instructions.

**Item 17:** Proposals to abandon a well and subsequent reports of abandonment should include such special information as is required by local Federal and/or State offices. In addition, such proposals and reports should include reasons for the abandonment; data on any former or present productive zones, or other zones with present significant fluid contents not sealed off by cement or otherwise; depths (top and bottom) and method of placement of cement plugs; mud or other material placed below, between and above plugs; amount, size, method of parting of any casing, liner or tubing pulled and the depth to top of any left in the hole; method of closing top of well; and date well site conditioned for final inspection looking to approval of the abandonment.

70 sk cement plug in the open hole at the base of the surface casing.  
1 cement plug at the surface. Install a dry hole marker and  
0 clean location.

### NOTE:

If no casing is recovered or if 2516' of casing is is recovered, an additional 70 sk. cement plug will be placed in the open hole at approximately 1000'.
