				CER LEAKAGE TEST II			
•	akage test shall be commen ion of the well, and annually		etod well within seven days : the order authorizing the	after except that the previo- was previously shut-in	usly produced zone shall remain shut-in while the zone which n is produced.		
•		•	e completions within seven o	lays 7. Pressures for gas-	zone tests must be measured on each zone with a deadweight		
-	•		henever remedial work has b		e inservals as follows: 3 hours tests: immediately prior to the		
	during which the packer or communication is suspected o		bed. Tests shall also be take ivision.		e-period, at fifteen minute intervals during the first hour intervals thereafter, including one pressure measurement		
			e test, the operator shall not	fy immediately prior to t	the flow period, at least one time during each flow period (at		
	writing of the exact time th	e test is to be commenced.	Offset operators shall also b		dway point) and immediately prior to the conclusion of each		
notified. 3. The packer	lealage test shall commeno	e when both zones of the di	al completion are shut-in for	•	reasures may be taken as desired, or may be requested on wells y shown questionable test data.		
•			•				

- 3. The pacture leakage test shall commence when dots zones of the data completion are sint-in for pressure as abilization. both zones shall remain shas-in until the well-head pressure in each has stabilized, provided however, that they need not remain shas-in more than seven days.

 4. For flow Test No. 1, one zone of the dual completion shall be produced at the normal rate of production while the other zone remains shas-in. Such test shall be continued for seven days if the case of a gas well and for 24 hours in the case of an oil well. Note: if, on an initial packer leakage test, a gas well is being flowed to the atmosphere due to the lack of a pipeline connection the flow period shall be those bours.
- pas well is found in which a second property of the state - 24-hour oil zoos tests: all pressures, throughout the entire test, shall be continuously measured and recorded with recording pressure gauges the accuracy of which must be checked at least twice, once at the beginning and once at the end of each test, with a deadweight pressure gauge. If a well is a gas-oil or an oil-gas dual completion, the recording gauge shall be required on the oil zone only, with deadweight pressures as required above being taken on the gaz zone.

 8. The results of the above described tests shall be filed in triplicate within 15 days after completion of the test. Tests shall be filed with the Aztec District Office of the New Mexico Oil Conservation Division of Northwest New Mexico Packer Lealage Test form Revised 10/01/78 with all deadweight pressures indicated thereon as well as the flowing temperatures (gas zones only) and gravity and GOR (oil zones only).
