13. Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)

Amend approved plugging procedure to use 8.34 l./gal. mud with 40 sec/qt. viscosity, and eliminate cement plug at the Chacra top.

The originally submitted 9.0 lb/gal. mud is in excess of that needed to provide well control while plugging. As approved for other Gallup wells in this field, we request that mud properties be changed to 8.34 lb./gal. with a 40 sec./qt. viscosity.

The Chacra formation is not productive in the entire area. Placement of a cement plug here will serve no purpose in protection of hydrocarbons or useable water. We propose to eliminate this plug, placing plugs across Mesa Verde and P C-Fruitland zones as well as at the surface. This change has been approved in other West Bisti Unit wells.
