DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We drilled a 13-3/4" hole to 175'. Set 175' of 10-3/4" cas w/200 cc cement. Cement circulated. After waiting 24 hr for the cement to set, the cas was tested to 1200' for 30 min with no loss in pressure. We then drilled to 377 1/2' with an 8-3/4" hole and set 5 1/2" cas @ 1598 w/200 cc 1-1 Poccin. After waiting 48 hr, the cas was tested to 1500' for 30 min with no loss in pressure. The top of the cement in the annals is @ 3800' by calculation of fill up.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
