DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudlogging jobs, cementing points, and all other important proposed work)

We spudded this well at 5:00 P.M., 5-28-56 and drilled 12 1/4" hole to 200'; set 8 5/8" OD casing at 195' and cemented with 175 sacks cement with 2% gel. The cement circulated. After waiting 24 hours, the casing was tested to 1500' for 30 minutes with no loss in pressure.

We drilled 7 7/8" hole to 5002'; set 5 1/2" OD casing at 5002' and cemented with 200 sacks Pozzix. After allowing the cement to set for 48 hours, the casing was tested to 1500' for 30 minutes with no loss in pressure. The top of cement in the annulus is at 3750' by temperature survey.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
