SUNDRY NOTICES AND REPORTS ON WELLS

NOTICE OF INTENTION TO DRILL.....		SUBSEQUENT REPORT OF WATER SHUT-OFF.....	
NOTICE OF INTENTION TO CHANGE PLANS.....		SUBSEQUENT REPORT OF SHOOTING OR ACIDIZING.....	
NOTICE OF INTENTION TO TEST WATER SHUT-OFF.....		SUBSEQUENT REPORT OF ALTERING CASING.....	
NOTICE OF INTENTION TO RE-DRILL OR REPAIR WELL.....	<input checked="" type="checkbox"/>	SUBSEQUENT REPORT OF RE-DRILLING OR REPAIR.....	
NOTICE OF INTENTION TO SHOOT OR ACIDIZE.....		SUBSEQUENT REPORT OF ABANDONMENT.....	
NOTICE OF INTENTION TO PULL OR ALTER CASING.....		SUPPLEMENTARY WELL HISTORY.....	
NOTICE OF INTENTION TO ABANDON WELL.....			

(INDICATE ABOVE BY CHECK MARK NATURE OF REPORT, NOTICE, OR OTHER DATA)

October 16, 1961

Well No. B-2 is located 1900 ft. from S line and 1900 ft. from W line of sec. 33

NE 1/4, Sec. 33 26N 13W NMPM
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)
Marti Gallup San Juan New Mexico
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 6333 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudlogging jobs, cementing points, and all other important proposed work)

The Salgo B-2 was temporarily abandoned on May 6, 1959. On April 14, 1961, sand was found in the tubing. It was assumed that there was a casing leak above the top of the cement. Operations were suspended. It is now proposed to run tubing with bit and circulate out to 3030' PBD. Run tubing and packer to determine point of casing failure, set drillable bridge plug 20' below point of casing failure (or preferably below top of cement if casing failure is close to cement top). Run tubing with retrievable cementing packer and cement with 30 sacks Pennix "B". WOC 48 hours. Drill out bridge plug and clean out to 3030 PBD.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be continued.
