Figure 2. The effect of the concentration of the *Agrobacterium* suspension on the transformation efficiency of *Agrobacterium* strains. The *Agrobacterium* strains were grown in the YEA medium for 24 h and then adjusted to the concentration of  $1 \times 10^8$  cells/ml. The cells were then mixed with the plant cells and cocultured for 48 h. The transformation efficiency was determined by the number of GUS-positive cells. The results were expressed as the mean  $\pm$  SD of three independent experiments. \* indicates a significant difference ( $P < 0.05$ ) between the two strains.

11. I am a \_\_\_\_\_

Figure 1. The effect of the concentration of the polymer on the gelation time of the epoxy resin.

Figure 1. A schematic diagram of the experimental setup. The subject is seated in a chair, viewing a screen displaying a target. The target is a vertical line, and the subject is required to move a cursor to the target. The cursor is a small circle on the screen. The subject's hand is positioned at the starting point, and the cursor is moved to the target. The distance between the starting point and the target is 10 cm. The subject is required to move the cursor to the target within a specified time limit. The time limit is 10 seconds. The subject is required to move the cursor to the target within the specified time limit. The time limit is 10 seconds. The subject is required to move the cursor to the target within the specified time limit. The time limit is 10 seconds.

Year	Total	Male	Female
1970	10,000	6,000	4,000
1975	11,000	6,500	4,500
1980	12,000	7,000	5,000
1985	13,000	7,500	5,500
1990	14,000	8,000	6,000
