17. DESCRIBE PROPOSED OR COMPLETED OPERATIONS (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting and proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)

Chevron U.S.A. Inc. requests a one year extension of the long-term status for the wells listed in the table attached. More time is necessary to evaluate the pilot waterflood expansion installed in 1988. The expansion pilot waterflood outlined in the sundry dated December 9, 1987, was anticipated to become operational in the First Quarter of 1988, but did not become operational until almost the Third Quarter of 1988 due to delays. Some encouraging signs have been seen from this increased water injection, but more time is needed to determine if this expansion will be economic. In addition, we are evaluating the Coal Seam Methane potential of the acreage in the West Bisti Unit. Fruitland Coal does exist and is untested. We are currently reviewing the operating agreement to determine the method of testing the non-unitized coal beds with a currently shut-in unit well.

By the end of the Second Quarter 1989, we will submit a sundry outlining our plans for a Fruitland Coal test. We would like to understand the Coal Seam Methane potential better before abandoning these unit wellbores. By the end of the Fourth Quarter 1989, we will submit a sundry outlining the results of the waterflood expansion pilot. If the pilot was determined not to meet economic standards and no upper hole potential is determined to exist, then plans will be submitted at that time to start plugging wells in the First Quarter 1990. If the waterflood expansion is determined economic, then plans for a revamp will be submitted at that time.

I hereby certify that the foregoing is true and correct
