The elevation of the derrick floor above sea level is 5875 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

The above well was perforated with four shots per foot 4937-4971, and then sand oil fracked with 40,000 gallons oil and 40,000 pounds sand. Formation broke at 2200 pounds pressure. Average injection rate 42.4 barrels per minute. Well is currently being tested.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
