

El Paso Natural Gas Company

El Paso, Texas 79999

February 20, 1967

Mr. Emory C. Arnold
Supervisor, District III
New Mexico Oil Conservation Commission
1000 Rio Brazor Road
Aztec, New Mexico 87410

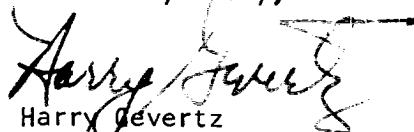

Dear Mr. Arnold:

We are enclosing an acreage plat showing the lands dedicated to the Huerfano Unit #156 Well. This non-standard gas proration unit is due to a variation in the legal subdivision of the United States Public Land Survey.

It is our understanding that you will not give written approval to any future applications but your approval will be indicated by assigning an allowable to the applicable well.

We plan to follow this procedure on all non-standard proration units which are not less than 75% or not more than 125% of a standard unit and are due to the variation of the United States Public Land Survey. If this procedure does not meet with your approval, please contact us as soon as possible.

Yours very truly,

Harry Gevertz
Supervising Landman
Land Department

Enclosure

NM-6024

1. Introduction

The purpose of this study is to investigate the effects of the proposed system on the performance of the system. The study is divided into two main parts: a theoretical analysis and an experimental evaluation.

2. Theoretical Analysis

In the theoretical analysis, we first consider the basic principles of the system. We then analyze the system's performance in terms of its ability to handle different types of data and its response time.

Next, we discuss the system's scalability and its ability to handle large amounts of data. We also analyze the system's security and its ability to protect sensitive information.

Finally, we discuss the system's flexibility and its ability to adapt to different environments. We also analyze the system's cost and its ability to provide a cost-effective solution.

3. Experimental Evaluation

The experimental evaluation is divided into two main parts: a performance evaluation and a security evaluation. In the performance evaluation, we measure the system's response time and its ability to handle different types of data.

In the security evaluation, we analyze the system's ability to protect sensitive information and its resistance to different types of attacks.

The results of the experimental evaluation are presented in the following sections.
