13. Describe Proposed or Completed Operation (clearly state all pertinent details, including estimated date of any proposed work and approximate duration. If the proposal is to deepen directionally or recompleat horizontally, give subsurface locations and measured and true vertical depths of all pertinent zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports shall be filed 30 days following completion of the involved operations. If the operation results in a multiple completion or recompleat in a new interval, A Form 3160-5 shall be filed once testing has been completed. Final Abandonment Notices shall be filed only after all requirements, including reclamation, have been met and the operator has determined that the site is ready for final inspection.)

Bayless again requests to be excused from your requirement that we conduct an MIT on this well. We will have this well on pump next week; along with other wells that were also returned to pump recently. As a result of this work, field production has increased from 30 to 160 BOPD.

When an MIT is done, up to 200 BW is dumped on the formation. Past experience in the field indicates that this can alter the near well relative permeability to oil. A much higher near-wellbore water saturation makes it easy for water to flow through the formation but difficult for oil. Both Amoco and Bayless have experienced this phenomena.
