13. Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)

It is proposed to change this well to long term shut-in status.

A study of this well indicates it has additional gas reserves which could be recovered if the well were equipped with pumping equipment and the gathering line pressure were lowered. Because of existing natural gas prices, it is not economical to install such equipment at this time. It is requested that this well be approved for long term shut-in status for the following reasons:

1. The well is currently unable to buck line pressure.
2. The well is unable to produce in paying quantities under current market conditions.
3. The well has additional reserves and has the potential to produce again if market conditions and/or line pressures change, or if pumping equipment can be economically installed.
