### EXHIBIT "B"

#### TEN-POINT COMPLIANCE PROGRAM

#### OF NTL-6 APPROVAL OF OPERATIONS

Attached to Form 9-331C Supron Energy Corporation Hodges #21 NE NE Sec. 34 T26N R8W 1265' FNL & 940' FEL San Juan County, New Mexico

### The Geologic Surface Formation

The surface formation is the Wasatch.

# 2. Estimated Tops of Important Geologic Markers

Ojo Alamo	1615'
Kirtland	1806'
Fruitland	2136'
Pictured Cliffs	2441'
Takal David	

Total Depth 2500'

# 3. Estimated Depths of Anticipated Water, Oil, Gas or Minerals

Ojo Alamo	1615'	Water
Kirtland	1806'	Water
Fruitland	2136'	Water
Pictured Cliffs	2500'	Water Gas

### 4. The Proposed Casing Program

HOLE	INTERVAL	SECTION	SIZE	WEIGHT GRADE	NEW OR
SIZE		LENGTH	(OD)	& JOINT	USED
12-1/4"	0-200'	200'	8-5/8"	24# K-55 ST&C	New
6-1/4"	0-2500'	2500'	2-7/8"	6.5# CW-55 8 Rd	I. New

Cement Plans: Single Stage - circulate to surface

# 5. The Operator's Minimum Specifications for Pressure Control

EXHIBIT "C" is a schematic diagram of the blowout preventer equipment. The BOP's will be hydraulically tested to half of working pressure after nippling up and after any use under pressure. Pipe rams will be operationally checked each 24-hour period, as will blind rams each time pipe is pulled out of the hole. Such checks of BOP will be noted on daily drilling reports.

Accessories to BOP will include a floor safety valve, drill string BOP and choke manifold with pressure rating equivalent to the BOP stack.

### 6. The Type and Characteristics of the Proposed Circulating Muds

Mud system will be fresh water gel with adequate stocks of sorptive agents on site to handle possible spills of fuel and oil on the surface. Heavier muds will be on location to be added if pressure requires.

DEPTH	TYPE	WEIGHT #/gal.	VISCOSITY-sec./qt.	FLUID LOSS cc
0-200'	Natural Mud			
200'TD	Fresh Water Gel	8.4 - 9.5	35 - 45	less than 10

## The Auxiliary Equipment to be Used

- (a) No kelly cock will be used.
- (b) A float will be used at the bit.
- (c) Neither a mud logging unit nor a gas detecting device will be monitoring the system.
- (d) A stabbing valve will be on the floor to be stabbed into the drill pipe when kelly is not in the string.

### 8. The Testing, Logging and Coring Programs to be Followed

- (a) No DST's are anticipated.
- (b) The logging program will consist of an IES and a GR Density over selected intervals. Other logs will be determined at well site to best evaluate any shows.
- (c) No coring is anticipated.
- (d) Stimulation procedures will be determined after evaluation of logs. If treatment is indicated, appropriate Sundry Notice will be submitted.

# 9. Any Anticipated Abnormal Pressures or Temperatures

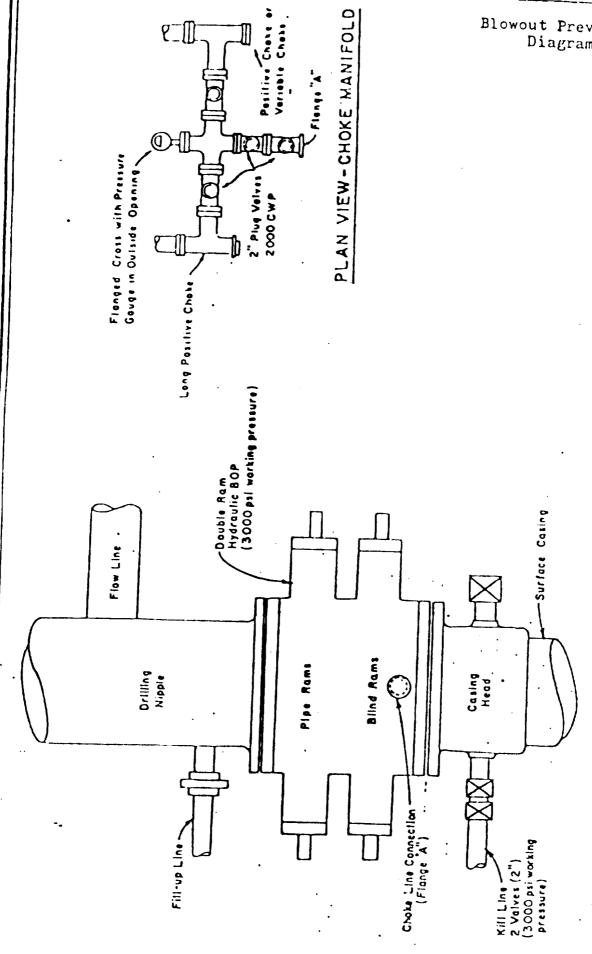

No abnormal pressures or temperatures have been noted or reported in wells drilled in the area nor at the depths anticipated in this well.

No hydrogen sulfide or other hazardous fluids or gases have been found, reported or known to exist at these depths in the area.

# 10. Anticipated Starting Date and Duration of the Operations

The anticipated starting date is set for August 30, 1980, or as soon as possible after examination and approval of drilling requirements. Operations should be completed within 5 days after spudding the well and drilling to casing point.

Blowout Preventer Diagram

### EXHIBIT "D"

# MULTI-POINT REQUIREMENTS TO ACCOMPANY A.P.D.

Attached to Form 9-331C Supron Energy Corporation Hodges #21 NE NE Sec. 34 T26N R8W 1265' FNL & 940' FEL San Juan County, New Mexico

# Existing Roads

- A. The proposed well site and elevation plat is shown as EXHIBIT "A".
- B. The distance from Blanco, New Mexico is 26.4 miles. From Blanco, go East 0.8 mile on Highway #17 to County Road 80; thence Southeast 7.2 miles, thence South 6.6 miles along wash on Country Road 58, cross wash and continue parallel to wash 8.3 miles, thence Southeast on oil field road 2.8 miles, thence South 2 miles and East 0.7 mile to the location, as shown on <a href="EXHIBITS">EXHIBITS</a> "E"</a>.
- C. All roads to location are color-coded on EXHIBITS "E" & "E $_1$ ". No new access road will be required.
- D. N/A
- E. This is a development well. All existing roads within a onemile radius are shown on <u>EXHIBIT</u> "E".
- F. The existing roads need no improvement. The grade does not exceed 6%.

# Planned Access Roads

No new access road will be required, access to the location is on existing roads.

# Location of Existing Wells

For all existing wells within a one mile radius of development well, see  $\underline{\sf EXHIBIT}$  "F".

- (1) There are no water wells within a one-mile radius of this location.
- (2) There is one abandoned well in this one-mile radius.

- (3) There are no temporarily abandoned wells.
- (4) There are no disposal wells.
- (5) There are no wells presently being drilled.
- (6) There are eleven (11) producing wells within this one-mile radius.
- (7) There are no shut-in wells.
- (8) There are no injection wells.
- (9) There are no monitoring or observation wells for other uses.

## Location of Existing and/or Proposed Facilities

- A. Within a one-mile radius of location the following existing facilities are owned or controlled by lessee/operator:
  - (1) Tank Batteries: Yes Supron has producing wells in the area.
  - (2) Production Facilities: Yes same as above.
  - (3) Oil Gathering Lines: None
  - (4) Gas Gathering Lines: Yes same as #1.
  - (5) Injection Lines: None
  - (6) Disposal Lines: None
- B. If the well is productive, new facilities will be as follows:
  - (1) Production facilities will be located on solid ground of cut area of drill pad, as shown on EXHIBIT "G".
  - (2) All well flow lines will be buried and will be on the well site and battery site.
  - (3) Facilities will be 250 feet long and 200 feet wide.
  - (4) All construction materials for battery site and pad will be obtained from site. No additional material from outside sources is anticipated.
  - (5) Any necessary pits will be fenced and flagged to protect livestock and wildlife.
- C. Rehabilitation, whether well is productive or dry, will be made on all unused areas in accordance with B.L.M. stipulations.

### Location and Type of Water Supply

- A. The source of water will be the San Juan River, 25 miles Northwest of the location, as shown on <u>EXHIBIT</u> "E".
- B. Water will be transported by truck over existing roadways.
- C. No water well is to be drilled on this lease.

#### 6. Construction Materials

- A. No construction materials are needed for drilling well or constructing access roads into the drilling location unless well is productive. The surface soil materials will be sufficient or will be purchased from Dirt Contractor as needed.
- B. No construction materials will be taken off Federal land.
- C. All surface soil materials for construction of access roads are sufficient.
- D. All major access roads presently exist as shown on EXHIBIT "E".

#### 7. Handling of Waste Materials and Disposal

- (1) Drill cuttings will be buried in the reserve pit.
- (2) Drilling fluids will be handled in the reserve pit.
- (3) Any fluids produced during drilling test or while making production test will be collected in a test tank. If a test tank is not available during drilling, fluids will be handled in reserve pit. Any spills of oil, gas, salt water or other noxious fluids will be cleaned up and removed.
- (4) Chemical toilet facilities will be provided for human waste.
- (5) Garbage, waste, salts and other chemicals produced during drilling or testing will be handled in trash/burn pit. Drill fluids, water, drilling mud and tailings will be kept in reserve pit, as shown on <a href="EXHIBIT">EXHIBIT "H"</a>. The trash/burn pit will be totally enclosed with small mesh wire to prevent wind scattering trash before being burned or buried. Reserve pit will be fenced on three sides and the fourth side fenced upon removal of the rig.
- (6) After the rig moves out, all materials will be cleaned up and no adverse materials will be left on location. Any dangerous open pit will be fenced during drilling and kept closed until the pit has dried and is filled.

### Ancillary Facilities

No air strip, camp or other facilities will be built during drilling of this well.

### 9. Well Site Layout

- (1) EXHIBIT "G" is the Drill Pad Layout as staked, with elevations, by Powers Elevation of Durango, Colorado. Cuts and fills have been drafted to visualize the planned cut across the location spot and the deepest part of the pad. Topsoil will be stockpiled per BLM specifications determined at time of pre-drill inspection.
- (2) EXHIBIT "H" is a plan diagram of the proposed rig and equipment, reserve pit, trash/burn pit, pipe racks and mud tanks. No permanent living facilities are planned. There will be a trailer on site.
- (3) EXHIBIT "G" is a diagram showing the proposed production facilities layout.
- (4) The reserve pits will not be lined.

### 10. Plans for Restoration

- (1) Backfilling, leveling and contouring are planned as soon as all pits have dried. Waste disposal and spoils materials will be buried or hauled away immediately after drilling is completed. If production is obtained, the unused area will be restored as soon as possible.
- (2) The soil banked material will be spread over the area. Revegetation will be accomplished by planting mixed grasses as per formula provided by the BLM. Revegetation is recommended for road area, as well as around drill pad.
- (3) Three sides of the reserve pit will be fenced during drilling operations. Prior to rig release, the reserve pit will be fenced on the fourth side to prevent livestock or wildlife from becoming entrapped; and the fencing will be maintained until leveling and cleanup is accomplished.
- (4) If any oil is on the pits and is not immediately removed after operations cease, the pit containing the oil or other adverse substances will be flagged overhead or covered with wire mesh.
- (5) The rehabilitation operations will begin immediately after the drilling rig is removed. Removal of oil or other adverse substances will begin immediately or area will be flagged and fenced. Other cleanup will be done as needed. Planting and revegetation is considered best in Fall, 1981, unless requested otherwise.

#### 11. Other Information

- (1) The soil is a sandy loam. The area is covered with cactus and native grasses. There are reptiles, rabbits and deer in the area. The location is adjacent to an existing pad, immediately below Thompson Mesa bounded by a wash on the West side.
- (2) The primary surface use is for grazing. The surface is owned by the U.S. Government.
- (3) The closest live water is the San Juan River, 25 miles Northwest of the location, as shown on EXHIBIT "E".

The closest occupied dwelling is located 6 miles Northwest of the location, as shown on EXHIBIT "E<sub>1</sub>".

There are no known archaeological, historical, or cultural heritages that will be disturbed by this drilling.

- (4) There are no reported restrictions or reservations noted on the oil and gas lease.
- (5) Drilling is planned for on or about August 30, 1980. It is anticipated that the casing point will be reached within 5 days after commencement of drilling.
