Re: Proposed Surface Commingling
Dugan Production Corp.'s Paul Revere No. 90 (API No. 30-045-29842) ^H 15-26N-13W
Dugan Production Corp.'s Paul Revere No. 92 (API No. 30-045-28290) 15-26N-13W
Dugan Production Corp.'s Paul Revere No. 93 (API No. 30-045-28341) 6-32-26N-13W
Sections 15 & 22, T-26N, R-13W
Federal Lease NM-17781
Basin Fruitland Coal gas pool
San Juan County, NM

Dear Ms. Wrotenbery,

We are writing to request your administrative approval to surface commingle natural gas produced from the captioned wells which will allow us to deliver natural gas to an on-lease central delivery sales meter (CDP). Since only one federal lease is involved and the CDP sales meter is located on the lease, the BLM does not consider this proposal to be an issue that requires their approval. We will send informational copies to them.

Attachment No. 1 was reproduced from the Moncisco Wash USGS Quadrangle Topography map and presents the proposed Paul Revere 90 CDP along with the subject lease and wells. Dugan's Federal Lease No. NM-17781 is the only lease involved and comprises the spacing units for the all three wells. The proposed CDP gas sales meter will be on El Paso's pipeline at a location of $\pm 2300'$ FWL & $\pm 850'$ FSL of Section 15 (T-26N, R-13W) which is located on this lease.

Attachment No. 2 presents information for each of the wells proposed for this CDP and Attachment No. 3 presents C-102's for each well which also includes the dedicated spacing units. Dugan Production Corp. is the operator of all three wells and holds 100% of the working interest. The royalty and overriding royalty interest is common for all wells and Attachment No. 4 presents individual well ownership information.

The Paul Revere No. 90 was spudded on 8-28-00 and completed in the Basin Fruitland Coal on 9-14-00 from perforations 1209' to 1228' with an initial pumping potential of 40 mcf/d plus 75 BWPD. This well is currently shut in and upon connection for gas sales, we anticipate production will exhibit performance typical to the Fruitland Coal, i.e., as dewatering progresses, the gas rates will gradually increase to ± 200 mcf/d.

The Paul Revere No. 92 was spudded on 12-3-90 and completed in the Basin Fruitland Coal on 5-5-93 from perforations 1244' to 1271' with an initial pumping potential of 27 mcf/d plus 154 BWPD. This well is currently shut in and should also exhibit production performance typical to the Fruitland Coal upon connection to our proposed gas gathering facilities, i.e. gas rates gradually increase to ± 200 mcf/d as dewatering progresses.

The Paul Revere No. 93 has not been drilled, but has been permitted and drilling is anticipated prior to 2-20-01. This well will be completed in the Basin Fruitland Coal and production is anticipated to be similar to the 90 and 92 wells, i.e. initially average 30 to 50 mcf/d which will gradually increase to ± 200 mcf/d as dewatering progresses. Water production should initially average 75 to 150 BWPD.

All fluid production will be separated from the gas, and will be stored, sold or disposed of at each well site. Since all production to be commingled comes from the Basin Fruitland Coal, we do not anticipate any liquid hydrocarbon production to occur. Only natural gas will be surface commingled. Each well will be equipped with continuous recording conventional gas metering equipment, such as a dry flow meter, and the volumes recorded at each well will be used to determine allocation factors for allocating the volumes recorded at the CDP sales meter to the individual wells. Each allocation meter will be installed and maintained by DPC and the charts from each meter will be integrated monthly by a commercial chart service. The proposed allocation procedures are presented on Attachment No. 5.

Gas production from all three wells is believed to be compatible and mixing should not create any operational problems. Attachment No. 6 presents a copy of a gas analysis believed to be representative for the Basin Fruitland Coal in this area.

We are sending copies of this application to all interest owners. DPC holds 100% of the working interest and all royalty is federal. Attachment No. 7 presents a copy of the sundry transmitting this application to the BLM and Attachment No. 8 presents a copy of the letter sent to the two overriding royalty interest owners.

In summary, we are proposing to surface commingle natural gas production from three Basin Fruitland Coal wells, two of which are completed and one to be drilled in the very near future. The proposed CDP sales meter is on the lease and will be a new meter installation, operated and maintained by El Paso Field Services Co. The proposed surface commingling will allow us to use a central compressor at the CDP for all three.

Should you have questions or need additional information, please let me know.

Sincerely,

John D. Roe
Engineering Manager

Notes:

N/A - Not needed

- Note (1) - The Paul Revere No. 90 was completed 9-14-00. Pump equipment was installed 9-21-00 and a rate of 40 mcf + 75 BWPD was tested on 10-5-00. This well is currently shut in and waiting on the installation of gas gathering facilities.
- Note (2) - The Paul Revere No. 92 was completed on 5-5-93 with an initial pumping potential of 15 mcf + 25 BWPD. This well is currently shut in and waiting on the installation of gas gathering facilities.
- Note (3) - The Paul Revere No. 93 has not been drilled. An APD has been approved and drilling is planned prior to 2-20-01. Once completed, it will be connected to Dugan's gas gathering facilities.
- Note (4) - Upon connection to Dugan's proposed gas gathering facilities and Paul Revere 90 CDP, an initial rate of 30 to 50 mcf is anticipated which hopefully will increase to ±200 mcf as dewatering of the Fruitland Coal progresses. Initial water production is anticipated to be 75 to 150 BWPD.

Proposed Allocation Procedures
Dugan Production Corp.'s
Paul Revere 90 CDP
SE SW 15, T-26N, R-13W
San Juan County, New Mexico

Base Data for Gas Production, BTU & Revenue Allocations:

W=Volume (MCF) from Well Allocation Meter

X=Volume (MCF) from CDP Sales Meter

Y=BTU's from CDP Sales Meter

Z=Gas Revenue (\$) from CDP Sales Meter

1. **Allocated Individual Well Production** = A+B+C+D+E

A = Allocated Sales Volume, MCF

$$= (W / \text{SUM } W) \times X$$

B = Fuel used on lease, MCF. Determined from equipment specifications and operating conditions.

C = Purged and/or vented gas from well and/or lease equipment, MCF. Calculated using equipment specifications and pressures.

D = Allocated fuel from gathering system equipment, MCF. The total fuel required to operate gathering system equipment will be allocated to the individual wells benefitting from the equipment using allocation factors determined by $W / \text{Sum } W$ for the wells involved.

E = Allocated volume of gas lost and/or vented from the gathering system and/or gathering system equipment, MCF. The total volume will be determined using industry accepted procedures for the conditions existing at the time of the loss. All volumes corresponding to liquid condensation within the gathering system will also be determined. The total volume lost and/or vented will be allocated to the individual wells affected using factors determined by $W / \text{Sum } W$.

2. **Allocated Individual Well BTU's** = $((W \times \text{Individual well BTU}) / \text{Sum } (W \times \text{individual well BTU})) \times Y$.

Individual well gas heating values to be determined in accordance with BLM regulations (currently Onshore Order No. 5).

3. **Allocated Individual Well Gas Revenues** = $(\text{Allocated Individual wells BTU's} / \text{Sum Allocated individual well BTU's}) \times Z$

13. Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)*

In the attached application dated 11/30/00, Dugan Production Corp. has proposed to surface commingle natural gas production from Dugan's Paul Revere wells No. 90, 92 & 93 and deliver the commingled gas stream to an on-lease central delivery (CDP) sales meter to be installed and operated by El Paso Field Services Co. The 90 & 92 wells are currently completed in the Basin Fruitland Coal gas pool and the 93 well has been permitted to the Basin Fruitland Coal. We anticipate drilling this well by 2/20/01. Only one federal lease (NM-17781) is involved and comprises the spacing units for all three wells. It is our understanding BLM approval is not required for this proposed CDP and that this sundry is for informational purposes. Pertinent data for the wells and CDP sales meter follows:

Well/Meter	API No.	Location	Lease No.
Paul Revere No. 90	30-045-29842	SENE-15-26N-13W	NM-17781
Paul Revere No. 92	30-045-28290	NWSW-15-26N-13W	NM-17781
Paul Revere No. 93	30-045-28341	SWNE-22-26N-13W	NM-17781
CDP Sales Meter	none	SESW-15-26N-13W	NM-17781

14. I hereby certify that the foregoing is true and correct

Re: Dugan Production Corp.'s
Paul Revere No. 90 (H-15-26N-13W)
Paul Revere No. 92 (L-15-26N-13W)
Paul Revere No. 93 (G-22-26N-13W)

Dear Overriding Royalty Interest Owner,

Attached for your information, review and file is a copy of our application to the New Mexico Oil Conservation Division to surface commingle natural gas produced from the captioned wells in which you have an overriding royalty interest ownership. The Paul Revere 90 and 92 wells have been drilled but have not been placed on production. The Paul Revere No. 93 has not been drilled, but should be drilled by early next year. The proposed surface commingling will allow us to place all three wells on production and will allow all three wells to share the cost of operating a central compressor.

This proposal should not affect your interest in these wells and should allow your revenues to increase since all wells will share a central compressor which hopefully will require less lease fuel.

Should you have any questions, need additional information or have any concern as to our proposal, please let me know. Should you have an objection, please let me know, or you can contact the New Mexico Oil Conservation Division directly at 2040 South Pacheco Street in Santa Fe, New Mexico 87505. Any objection should be filed within 20 days of the date of this letter, and we would appreciate receiving a copy.

Sincerely,

John D. Roe
Engineering Manager
