1961

Well No. 1 is located 660 ft. from N line and 660 ft. from E line of sec. 27
NE/4 27 28N 1E NE/4
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)
Sildcot **Dakota** **Rio Arriba** **New Mexico**
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 7151 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Spud in Mancos shale; set 3 joints, approximately 90', 10 1/2" csg., cementing to surface, drill 9" hole with cable tools to test Dakota sandstone, or to a depth of 2100 feet. Plan to run fluid shut off strings if necessary, landing on pattern shoes. May cement casing if oil or gas encountered above Dakota. Will run 4 1/2" production casing through Dakota, attempting 400 feet cement fillup over top of productive zone, if Dakota is indicated to be capable of commercial production.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
