## DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

On December 21, 1953, perforations from 4190' to 4206' were acidized with 1000 gallons Dowell Super Mud Acid, perforations from 4150' to 4160' were acidized with 1000 gallons Dowell Super Mud Acid, and perforations from 4065' to 4120' were acidized with 2000 gallons Dowell Super Mud Acid. On December 27, 1953, the well tested 88 MCF after blowing one hour. On December 28, 1953, 7" casing was perforated from 4065' to 4046', with 3 jet shots and 2 bullet shots per foot. The well tested 139 MCF per day through a 2" opening, after blowing 15 minutes. On December 29, 1953, 2" tubing was run and set at 4323'. The well was then shut in for pressure build-up tests.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
