Well No. 15 is located 1070 ft. from [N] line and 950 ft. from [E] line of sec. 29
SE Sec. 29 27N 10W N.M.P.M.
($\frac{1}{4}$ Sec. and Sec. No.) (Twp.) (Range) (Meridian)
West Kutz Ext. San Juan New Mexico
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 6050 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Total depth 1835', Clean out depth 1765'.

This well, having an initial potential of only 116 MCF/D, is not considered to be a commercial producer. It is therefore planned to plug and abandon this well in the following manner:

1. Squeeze off Pictured Cliffs perforations at 1743-1764 with 50 sacks cement.
2. Remove 5 1/2" casinghead and spool, and 1 1/4" tubing head.
3. Set cement plug from 400' to surface with 50 sacks cement.
4. Set 4" pipe 4' high at surface as permanent marker.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
