Re: Application for Dual Completion
Marron Well No. 42-M, Section
22-27N-8W

Gentlemen:

We are in receipt of the subject application. This is to advise that your proposal to use a retrievable packer to separate the Mesaverde and Dakota gas producing zones in this well is not acceptable. It will be required, for the approval of this dual completion, that a permanent type packer be installed to separate the zones.

In future applications please send the original and one copy of the application form with diagrammatic sketch and plat attached to each form to the Santa Fe office.

Very truly yours,

E. J. FISCHER
District Engineer

EJF/og

Encls.
