The elevation of the derrick floor above sea level is 6163 ft. (G.L.)

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Well was drilled to a total depth of 2135 with rotary tools. Cable tool rig moved onto well and well cleaned out to bottom. On natural test with 2" orifice well tester, well tested 26.8 MCF/Day.

Well was plugged back with pea gravel from 2135 to 2112 and shot with 540 quarts of SNG from 2112 to 2043 with 5 feet of pea gravel on top of shot on June 15, 1951. Well was cleaned out to bottom. 1 1/2" tubing was landed at 2092. Well was shut in 120 hours.

Well measured 1070 MCF/Day after 3 hour blow down through siphon string with Pitot tube through 2" pipe nipple June 25, 1951.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
