DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Upon abandonment, a cmt plug will be placed over the perforated zone in the interval 5950'-5650'. Csg will then be shot off at the free point and pulled. A 50' cmt plug will be placed at the cut-off stub of the 4 $\frac{1}{2}$ " csg. If csg is cut off at a point below the Mesa Verde and/or Picture Cliff, cmt plugs will also be set in the intervals 2050'-2150' and 1150'-1250'. A surface water shut-off plug will be set in the interval 850'-950' and a 50' cmt plug will then be placed at the surface. A marker 4' high made of 4" pipe will be set to mark the location.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
