The elevation of the derrick floor above sea level is 6121 ft. (S.L.)

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

On May 30, 1951, at 8:15 A.M., 5-1/2" casing was set at 1776 feet with 75 sacks cement. Rotary rig was moved off of location and cable tool rig rigged up for drilling cement plug and pay.

On June 11, 1951, hole was bailed dry and remained dry for two hours. Twenty-five feet of solid cement was then drilled in bottom of pipe and hole again bailed dry. Hole remained dry for two hours which was considered a satisfactory water shut-in test.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
