October 14, 1957

Well No. **I** is located **990** ft. from **N** line and **990** ft. from **E** line of sec. **18**
NW1/4 **27N** **13W** **18PM**
 (1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)
Wilcox **San Juan** **New Mexico**
 (Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is **6055** ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill a 12 1/4" hole to 250' and set 9 5/8" surface casing and cement with 150 sacks of cement. We will then drill a 8 3/4" hole to the top of the Gallup formation at approximately 5400'. We will core the Gallup and test the formation. If the formation is favorable we will set 7" casing. If unfavorable we propose to drill to the Dakota and test this formation. If favorable we propose to set 5 1/2" casing and cement with 300 sacks of cement. If both formations indicate production can be obtained we will seriously consider a dual completion.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
