Tidewater Federal  
Well No. 1-7M is located 660 ft. from [S] line and 660 ft. from [W] line of sec. 7

Section 7 27 North 13 West N.M.P.M.  
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)  
Wildcat San Juan New Mexico  
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 6013 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding job, cementing points, and all other important proposed work)

It is proposed to drill 13 3/4" hole and set 400' of 9 5/8" H-40, 32-30# casing with 250 sack regular cement. A 7 7/8" hole will be mud-drilled to 4500' or through the Gallup formation. No cores are anticipated. IBS, micro-log and sonic log will be run at T.D. If logs indicate commercial production, 5 1/2", J-55, 15 1/4# casing will be run to T.D. and cemented with 150 sack 50-50 Pozmix, 4% gel. The well will then be fraced and completed with 2", J-55 4.7# tubing.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
