DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Spudded 12-1/4" hole on December 14, 1959, and drilled to 236'. 9-5/8" casing was set at 236' with 120 sacks of cement containing two percent calcium chloride. Cement circulated. After waiting on cement, tested casing and water shutoff with 800 psi for 30 minutes which held with no indication of pressure drop. Reduced hole to 7-7/8" at 236' and resumed drilling.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
