August 13, 1957

Well No. **1** is located **660** ft. from **N** line and **1980** ft. from **E** line of sec. **8**  
**NE 1/4 Sec. 8** **27N** **13W** **N. M. P. M.**  
 (Sec. and Sec. No.) (Twp.) (Range) (Meridian)  
**Wilcox** **San Juan** **New Mexico**  
 (Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is **5956** ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to deepen the present well by 800 feet by drilling a 4 3/4" hole through the present 5 1/2" casing. We will drill stem test and log the Dakota sand. If warranted, we will set 3" casing and cement with 150 sacks of cement. We will then perforate and free the Dakota and produce through 2" tubing.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
