DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Since this well is non-productive in the Hermosa, we proposed to plug and abandon the well in the following manner:

Cut 7" casing at approximately 4000' and pull. Place 40' plug inside 7" casing and a cap over the 7". Cut 9 5/8" casing at approximately 1300' and pull. Set 50' plug inside 9 5/8" and a cap over the 9 5/8". Set 20 plug in bottom of 13 3/8", 10' surface plug and marker. All intervals between plugs to be filled with heavy mud. Final plugging program will follow.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
