DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

To locate and squeeze a 30 bbl/ day water intrusion in the subject well. While testing, a hole was located up in the casing at 1883' KB. Set a wire line Brdg. plug at 2000' and on the sixth attempt a squeeze was obtained thru new perms. at 1881' (4-way Sqz. gun) using a total of 577 sacks of cement. Futher testing located the water coming in the perforation at 6248 to 6272. As this was our main pay section we did not attempt to squeeze at this time. The well was put back on production while a more complete study is being made

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
