1. The first step in the process of the investigation is the identification of the problem. This is done by the investigator who is assigned to the case. The investigator will then gather information about the problem and the people involved. This information will be used to develop a plan of action.

2. The second step is the development of a plan of action. This plan will outline the steps that will be taken to solve the problem. The plan will also identify the people who will be responsible for each step.

3. The third step is the implementation of the plan. This is done by the people who are responsible for each step of the plan. The investigator will monitor the progress of the plan and make adjustments as needed.

4. The fourth step is the evaluation of the results. This is done by the investigator who will compare the results of the plan to the original problem. The investigator will then report on the results of the investigation.

5. The fifth step is the dissemination of the results. This is done by the investigator who will share the results of the investigation with the people who are involved in the problem. This will help them to understand the problem and the steps that were taken to solve it.

CONFIDENTIAL

It is of the greatest importance to have a complete history of the well. Please state in detail the dates of redrilling, together with the reasons for the work and its results. If there were any changes made in the casing, state fully, and if any casing was "sidetracked" or left in the well, give its size and location. If the well has been dynamited, give date, size, position, and number of shots. If plugs or bridges were put in to test for water, state kind of material used, position, and results of pumping or drilling.
