San Juan County, New Mexico

Dear Frank:

In regards to our telephone conversation 2-21-86 (new allowable request) and the reason for doing so.

When we completed this well 5-16-84, our field people forgot to screw the donut studs in the well head to hold the donut down as casing pressure would build, so consequently the well was producing up the casing around the donut and not up the tubing, it was not noticed until the well got to logging off with fluid and by this time the gas had cut all packing from around donut, we killed the well and repaired donut, see copy of work ticket, so at this time we are requesting a 2nd deliverability test for new allowable, if we can explain this more, or you need more detail, please let me know.

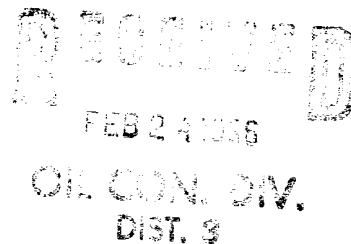

Sincerely,

*D. E. Baxter*
