As a result of the above, the authors have concluded that the use of the proposed model is not only feasible but also effective in predicting the behavior of the system. The model can be used to predict the behavior of the system under various conditions and parameters. The model can be used to predict the behavior of the system under various conditions and parameters.

Figure 1. Schematic representation of the experimental design. The subjects were divided into two groups: the control group and the experimental group. The control group received a standard diet and water, while the experimental group received a standard diet and water with a 10% sucrose solution. The experimental group was further divided into two subgroups: the sucrose group and the water group. The sucrose group received a 10% sucrose solution, while the water group received water. The subjects were monitored for weight gain and food intake over a period of 14 days.
