Martin Gas Unit B

Farlington, New Mexico February 19, 1960

Well No. 1 is located 1750 ft. from [S] line and 1140 ft. from [E] line of sec.

1/4 of Section 31 T-20N R-10E R.A.P.M.  
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)

Pulcher Kutz Pictured Cliffs San Juan New Mexico  
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 5887 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to plug and abandon Martin Gas Unit B Well No. 1 as follows, since well has ceased to produce a measurable volume of gas.

1. Pull 1-1/4" tubing.
2. Spot 25 sacks cement plug on bottom (approximately 200' of fill-up into casing) and squeeze with minimum pressure to leave perforations covered by cement.
3. Fill hole with fluid.
4. Pump 50 sacks of cement down 5-1/2"-6-5/8" annulus to anchor pipe.
5. Remove wellhead and surface equipment.
6. Spot 5 sacks of cement for surface plug (0-40) and erect dry hole marker.
7. Plug and abandonment by above procedure to permit future re-entry in the event other zones are discovered to be productive in the area.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
