(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 6008 ft. (G.L.)

## DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill the above well approximately to 2200 feet. Rotary tools will be used to total depth. Casing will be set on top of pay. Pictured Cliffs pay section will be drilled with gas and Sandoil fraced.

The following casing program is proposed:

Size	Depth	Cement	Remarks
8-5/8"	100'	75	175% of calculated amount to circulate.
5-1/2"	2100'	75	100% of calculated amount to fill 600' above shoe.

Copies of location plat are attached. A copy of any survey taken will be submitted upon completion of well.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
