13. Describe Proposed or Completed Operations

The subject well was evaluated for casing integrity; current tubing/casing pressure are 105 and 105 respectively, indicating integrity for the wellbore is sound and no remedial action is currently required. The subject well is currently non-productive due to excessively high line pressure. Should line pressure drop sufficiently, this well will produce in economic quantities. We are currently evaluating options to reduce line pressure in general, and allow the subject well to once again produce in economic quantities.
