## Omler 6

## **Fulcher Kutz Pictured Cliffs** 1190' FNL and 1820' FEL

Unit B, Section 25, T28N, R10W

Latitude / Longitude: 36° 38.23'/ 107° 50.63'

DPNO: 5089701

Tubing Repair Procedure (Rig & Rigless)

Project Summary: The Omler 6 was drilled in 1955. The tubing has not been pulled since originally installed. We propose to pull the 1" tubing with a rig, clean out with coil tubing and hang 1-3/4" Rilsan Nylon 11 coil tubing. The well has not produced since 1997. Estimated uplift is 40 MCFD gross. Cumulative production is 795 MMCF. Note: Coordinate rig work with coil tubing unit.

### **WORKOVER RIG: (Pull tubing)**

- Hold safety meeting. Comply with all NMOCD, BLM and Burlington safety and environmental regulations. Test rig anchors and build blow pit prior to moving in rig. Notify BROG Regulatory (Peggy Bradfield 326-9727) and the appropriate Regulatory Agency prior to pumping any cement job. If an unplanned cement job is required, approval is required before the job can be pumped. If verbal approval is obtained, document approval in DIMS/WIMS. Allow as much time as possible prior to pump time in case the Agency decides to witness the cement job.
- MOL and RU workover rig. Obtain and record all wellhead pressures. NU relief line. Blow well down 2. and kill with 2% KCl water if necessary. NU BOP with stripping head. Test and record operation of BOP rams. Have wellhead and valves serviced as necessary. Test secondary seal and replace/install as
- The Pictured Cliffs tubing is 1" set at 1980'. Release donut. TOOH with tubing. ND BOP and NU WH. 3. RD and MOL

## COIL TUBING UNIT (Cleanout and install coil tubing)

- Install coil tubing wellhead assembly. MOL and RU coiled tubing unit. Obtain and record all wellhead 4. pressures. NU relief line. Blow well down and kill with 2% KCl water if necessary. NU BOP with injector head. Test and record operation of BOP rams.
- TIH with 1-3/4" coil tubing with wash tip and tag bottom (record depth.). Clean out with air/mist to PBTD 5. at +/- 2000'. PU to bottom of the casing and flow the well naturally, making short trips for clean up when necessary. TOOH with tubing. Lay down wash tip. NOTE: When using air/mist, minimum mist rate is 12 bph.
- Thread a SN with expendable check on bottom of 1-3/4" Rilsan Nylon 11 coil tubing (HDPE). TIH with 6. coil tubing, expendable check and seating nipple. Land tubing in tubing hanger at approximately 1980'. Raise BOP and injector head enough to set slips around coil tubing. Ensure slips set into hanger and cut off coil tubing. Remove BOP and injector head. NU wellhead. Pump off expendable check. Connect to casing and circulate air to assure that expendable check has pumped off. Jet well in. RD and MOL. Return well to production.
