The elevation of the derrick floor above sea level is _____ ft. (To be reported later.)

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill the above well to an approximate depth of 6500' with rotary tools to evaluate Dakota prospects. Stimulation and completion will be as indicated upon reaching total depth. The following casing program is proposed:

SIZE	DEPTH	COMMENT	REMARKS
8-5/8"	350'		Heat - circulate.
4-1/2"	6500'		

Casing will be cemented in 2 stages. First stage 43 gal followed by 100 sacks neat or sufficient to fill 500' above top of Dakota. Second stage 43 gal cement with DV tool set approximately 100' below Pictured Cliffs and sufficient cement to fill 200' - 300' above Pictured Cliffs.

A copy of any survey taken will be submitted upon completion of well. Copies of location plate attached.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
