DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

This well was tested for 49 MCF/D on October 29, 1952, and made considerable water at that time.

A rig was moved back on this well November 11, 1952, the hole cleaned out and a liner was run to shut-off water in upper Mesaverde formations. The rig was moved off December 14, 1952. An attempt to test this well again shows only a small pressure build-up, indication of fluid accumulation or bridge in well.

It is desired to temporarily abandon this well while waiting for opportunity to workover once again at a later date.

I understand that this plan of work must receive approval in writing by the District Engineer before operations may be commenced.
