

NORTHWEST NEW MEXICO PACKER-LEAKAGE TEST

Operator SOUTHLAND ROYALTY COMPANY Lease Reid Well No. 18
Location of Well: Unit K Sec. 18 Twp. 28N Rge. 09W County San Juan

	Name of Reservoir or Pool	Type of Prod. (Oil or Gas)	Method of Prod. (Flow or Art. Lift)	Prod. Medium (Top. or Casg.)
Upper Completion	Blanco Mesaverde	Gas	Flow	Casing
Lower Completion	Basin Dakota	Gas	Flow	Tubing

PRE-FLOW SHUT-IN PRESSURE DATA

Upper Compl	Hour, date Shut-in	Length of time shut-in	SI press. psig	T. C.	Stabilized? (Yes or No)
	9-26-83	72 Hrs.		435 / 435	
Lower Compl	Hour, date Shut-in	Length of time shut-in	SI press. psig	T. C.	Stabilized? (Yes or No)
	9-26-83	72 Hrs.		447 / 447	

FLOW TEST NO. 1

Commenced at (hour, date)* 9-29-83				Zone producing (Upper or Lower): Upper	
Time (hour, date)	Lapsed time since*	Pressure		Prod. Zone Temp.	Remarks
		Upper Compl.	Lower Compl.		
9-27-83		T. 409 C. 407	T. 421		
9-28-83		T. 426 C. 425	T. 439		
9-29-83		T. 435 C. 435	T. 447		
9-30-83	24 Hrs.	T. 42 C. 276	T. 450		
10-01-83	48 Hrs.	T. 250 C. 307	T. 453		

Production rate during test
Oil: _____ BOPD based on _____ Bbls. in _____ Hrs. _____ Grav. _____ GOR _____
Gas: _____ MCFPD; Tested thru (Orifice or Meter): _____

MID-TEST SHUT-IN PRESSURE DATA

Upper Compl	Hour, date Shut-in	Length of time shut-in	SI press. psig	Stabilized? (Yes or No)
Lower Compl	Hour, date Shut-in	Length of time shut-in	SI press. psig	Stabilized? (Yes or No)

FLOW TEST NO. 2

Commenced at (hour, date)**				Zone producing (Upper or Lower):	
Time (hour, date)	Lapsed time since **	Pressure		Prod. Zone Temp.	Remarks
		Upper Compl.	Lower Compl.		

Production rate during test
Oil: _____ BOPD based on _____ Bbls. in _____ Hrs. _____ Grav. _____ GOR _____
Gas: _____ MCFPD; Tested thru (Orifice or Meter): _____

REMARKS: _____

I hereby certify that the information herein contained is true and complete to the best of my knowledge.

Approved: _____ 19_____
Oil Conservation Division

Title _____

Operator SOUTHLAND ROYALTY COMPANY
By James W. Smith
Title District Field Foreman
Date OCT 13 1983

NEW MEXICO PACKER LEAKAGE TEST INSTRUCTIONS

1. Tests shall be commenced on each multiply completed well immediately after actual completion of the well, and annually thereafter, or more often as ordered by the Division. Tests shall be conducted on all multiple completions within 30 days of completion and on chemical or fracture treatment completions within 60 days of completion. Tests shall also be taken at any time if the well is shut-in or otherwise disturbed. Tests shall be taken at any time if requested or when requested by the Division.

2. Tests shall be commenced prior to the commencement of any packer leakage test. The Division shall be notified in writing of the exact time the test is to be run. Packer operators shall also be so notified.

3. Tests shall commence when both zones of the dual completion are under pressure stabilization. Both zones shall remain shut-in until the pressure in each has stabilized, provided the well will not remain shut-in more than seven days.

4. If the zone of the dual completion shall be produced for a period of 7 days while the other zone remains shut-in, the test shall be continued for seven days in the case of a gas well and 14 days in the case of an oil well. Note: If, on an initial packer leakage test, the well is shut-in due to the lack of production, the flow period shall be three hours.

5. If the well is shut-in during Flow Test No. 1, the well shall again be shut-in for a period of 7 days.

6. If a test is conducted when no leak was indicated, the well shall be shut-in for a period of 7 days. If the well is shut-in for Flow Test No. 2 is to be the same as for Flow Test No. 1. If the well is shut-in for Flow Test No. 3 is to be the same as for Flow Test No. 2. If the well is shut-in for Flow Test No. 4 is to be the same as for Flow Test No. 3. If the well is shut-in for Flow Test No. 5 is to be the same as for Flow Test No. 4. If the well is shut-in for Flow Test No. 6 is to be the same as for Flow Test No. 5. If the well is shut-in for Flow Test No. 7 is to be the same as for Flow Test No. 6. If the well is shut-in for Flow Test No. 8 is to be the same as for Flow Test No. 7. If the well is shut-in for Flow Test No. 9 is to be the same as for Flow Test No. 8. If the well is shut-in for Flow Test No. 10 is to be the same as for Flow Test No. 9.

7. Pressures for gas-zone tests must be measured on each zone with a deadweight pressure gauge at time intervals as follows: 1-hour tests: immediately prior to the beginning of each flow-period, at fifteen-minute intervals during the first hour thereof, and at hourly intervals thereafter, including one pressure measurement immediately prior to the conclusion of each flow period. 7-day tests: immediately prior to the beginning of each flow period, at least one time during each flow period (at approximately the midway point) and immediately prior to the conclusion of each flow period. Other pressures may be taken as desired, or may be requested on wells which have previously shown questionable test data.

24-hour oil zone tests: all pressures, throughout the entire test, shall be continuously measured and recorded with recording pressure gauges, the accuracy of which must be checked at least twice, once at the beginning and once at the end of each test, with a deadweight pressure gauge. If a well is a gas-oil or an oil-gas dual completion, the recording gauge shall be required on the oil zone only, with deadweight pressures as required above being taken on the gas zone.

8. The results of the above-described tests shall be filed in triplicate within 15 days after completion of the test. Tests shall be filed with the Aztec District Office of the Oil Conservation Division on Northwest New Mexico Packer Leakage Test Form Revised 10-1-78, with all deadweight pressures indicated thereon as well as the flowing temperatures (gas zones only) and gravity and GOR (oil zones only). A pressure versus time curve for each zone of each test shall be constructed on the reverse side of the Packer Leakage Test Form with all deadweight pressure points indicated thereon. For oil zones, the pressure curve should also indicate all key pressure changes which may be reflected by the recording gauge charts. These key pressure changes should also be indicated on the front of the Packer Leakage Test Form.
