The elevation of the derrick floor above sea level is 5850 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

It is proposed to drill a Pictured Cliffs gas test to a total depth of approximately 2025'. Approximately 100' of 10-3/4" surface casing will be used and cement circulated. Approximately 1960' of 7" casing will be set 5' into the Pictured Cliffs sandstone with the use of rotary tools and cemented with 100 sacks. Cable tools will be employed to drill the Pictured Cliffs sandstone. The well will be shot with approximately 200 quarts of SNE, and the well completed in the usual manner.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.

Company Kata Canon Oil & Gas Company

Address Denver, Colorado
