#### SUPPLEMENTAL INFORMATION TO FORM 9-331C

DAVIDSON GAS COM "F" NO. 1E 1520' FNL & 1520' FWL, SECTION 28, T28N, R10W SAN JUAN COUNTY, NEW MEXICO

The geologic name of the surface formation is the Tertiary Nacimiento.

Estimated tops of important potential hydrocarbon bearing formations:

FORMATION	DEPTH	ELEVATION
Fruitland	1914'	+4255'
Pictured Cliffs	2199.	+3970 <b>'</b>
Mesaverde	3764 <b>'</b>	+2405
Dakota	6559'	- 390 <b>'</b>
TD	6909 <b>'</b>	

Estimated KB elevation: 6169'.

Drilling fluid to TD will be a low solids non-dispersed mud system. Open hole logging program will include the following logs from TD to below surface casing:

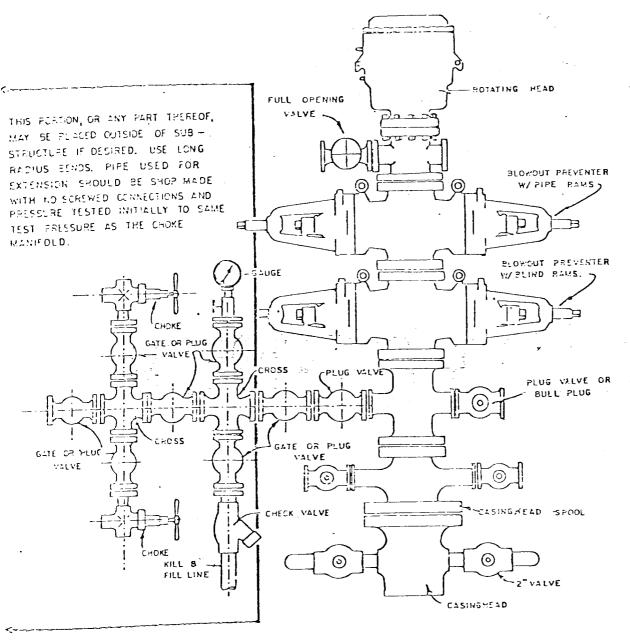

SP - Induction - GR \*
FDC - CNL - GR

\*GR will be run to surface

Completion design will be based on these logs. No cores or drill stem tests will be taken.

Operations will commence when permitted and last approximately 3 weeks.

Amoco's standard blowout prevention will be employed (see attached drawing).

BLOWOUT PREVENTER HOCKUP

## MULTI-POINT SURFACE USE PLAN

DAVIDSON GAS COM "F" NO. IE 1520' FNL & 1520' FWL, SECTION 28, T28N, RIOW SAN JUAN COUNTY, NEW MEXICO

- 1. The attached topographic map shows the proposed route to the location.
- 2. It will be necessary to build an access road approximately 350 feet in length. Location is 350' northeast of Amoco's Davidson "D" No. 2.
- Existing oil and gas wells within a one-mile radius of our proposed well have been spotted on the vicinity map.
- 4. There is a 210-barrel tank and facilities located at Davidson Gas Com "F" No. 1.
- Water will be hauled from the San Juan River.
- No construction materials will be hauled in for this location. 6.
- 7. A 125' by 125' pit will be built on location to hold all drilling waste. Upon completion of the well, pit will be fenced and waste and liquids left to dry, then pit will be filled and leveled.
- 8. There are neither airstrips nor camps in the vicinity.
- 9. The well site layout, reserve, burn and trash pits are shown on the attached Drill Site Specification Sheet. An 8-10 foot cut will be made on north side.
- Restoration of the surface will be accomplished by cleaning up and leveling upon completion of the well. Drilling mud will be hauled away and the reserve pit back filled. Reseeding of the site will be carried out as instructed by the Bureau of Land Management.
- The general topography is an uneven terrain with sandy loam-type soil. 11. Vegetation consists of cedar trees and native grasses.

Representatives of the U. S. Geological Survey's Farmington Office and the Bureau of Land Management inspected the site with Amoco personnel. Cultural resources inspection was conducted by an archaeologist from San Juan College.

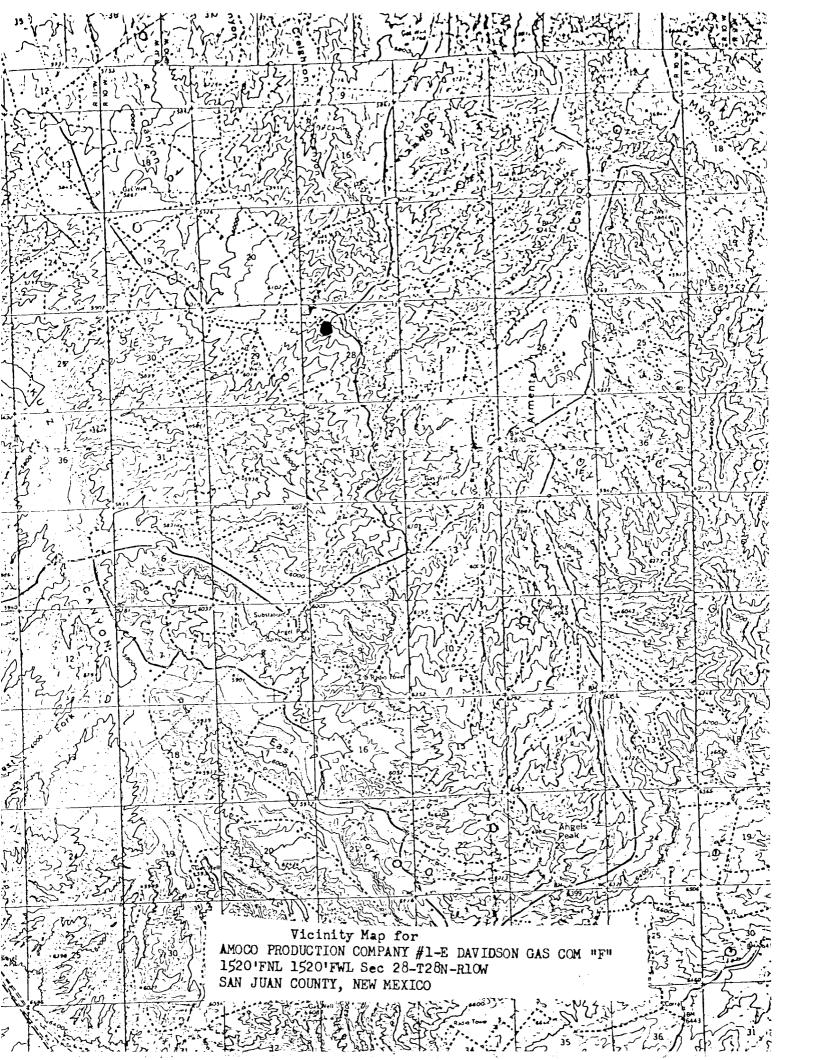

R. W. Schroeder 12. Operator's Representative:

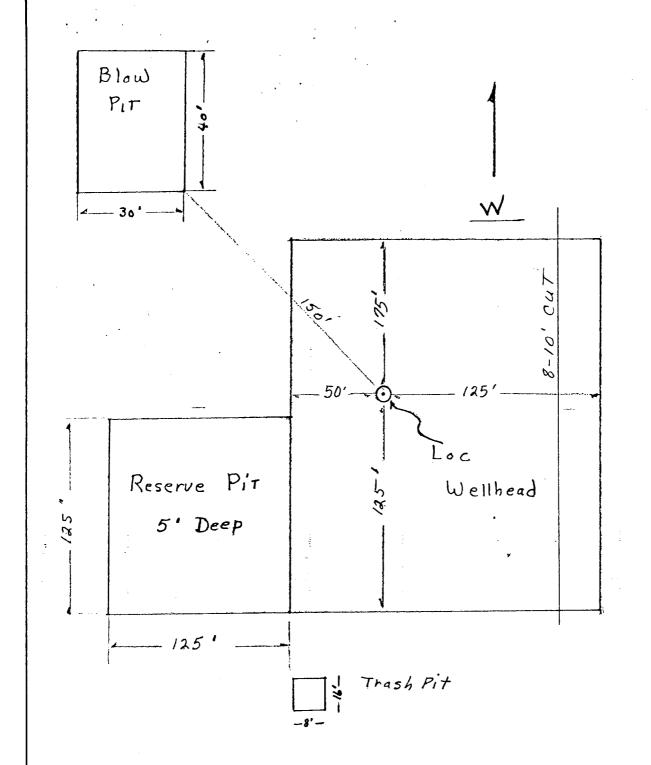

Phone: Office: 505-325-8841; Home: 505-325-6164 Address: 501 Airport Drive, Farmington, NM 87401

Certification: I hereby certify that I, or persons under my direct supervision, have inspected the proposed drillsite and access route, that I am familiar with the conditions which presently exist; that the statements made in this plan are, to the best of my knowledge, true and correct; and, that the work associated with the operations proposed herein will be performed by AMOCO PRODUCTION COMPANY and its contractors and sub-contractors in conformity with this plan and the terms and conditions under which it is approved.
