**DETAILS OF WORK**

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

**Jicarilla - S No. 1**

Well was drilled to a TD 3541'. 10 1/4" surface pipe was set at 93' and cemented with 150 sac to top. 5 1/2" was set at 3541' and cemented with 150 sac. Perforations were made from 3495' to 3512' and from 3508' to 3523'.

This well has been purchased by the Utah-New Mexico Casing Pullers of Vernal, Utah, for salvage and will be plugged. It is proposed to run cement plugs as follows:

From 3470' to Total Depth

A plug of 100' from 50' below where 5 1/2" casing is cut off to 50' above.

A plug of 50' from 68' to 118'.

A plug of 10' in the top of the surface casing.

A dry hole marker will be created and the location restored.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
