San Joaquin (Meridian)
San Joaquin (Field)
San Joaquin (County or Subdivision)
New Mexico (State or Territory)

The elevation of the derrick floor above sea level is _____ ft. (To be reported later)

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill Gallegos Canyon Unit Well No. 125 with rotary tools to an approximate total depth of 3000' to test and develop productive Gallegos. Stimulation and completion will be as indicated upon penetration of Gallegos Pay.

Proposed casing program as follows:

4-1/2"	100'	150' casing	Next liner - Circulate
4-1/2"	500'	350' casing	First stage - 125' casing liner at gal with 1-1/2"

ports 10' plug per sock and 75' casing liner next cement on bottom. Second stage - 150' casing liner at gal cement. 4-1/2" casing will be cemented by second stage method with stage tool set about 100' below base of colored cliffs. First stage will consist of sufficient cement to fill 500' above top of Gallegos.

Copies of location plots attached. A copy of any survey taken will be submitted upon completion of well.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
