Due to a water flood type reaction to water injection into S.E. Cha Cha #37, S.E. Cha Cha wells #19, 23, & 24 are currently producing  $\pm$  70 bbls oil per day as compared to 27 bbls oil per day in May, 1986. Because of this we have revised our plan to P & A this well and are considering injection of water into other areas of the unit. Plugging this well prematurely may cause a loss of potentially recoverable reserves.
