or recompilation.	of starting any proposed work). SEE RULE 1103. For Multiple Completions: Attach wellbore diagram of proposed completion						
This well was permitted to drill on April 17, 2001. Drilling permit was renewed April 15, 2002. The well has not been drilled as we							
are waiting on Navajo approval.							
BP America Production Company requests permission to complete into the Basin Fruitland Coal pool, come up hole, perf in the Pinon							
Fruitland Sand and commingle production down hole. This revision to the original drilling plan will change the TD from 1664' to 1683'.							
The Basin Fruitland Coal (71629) & the Pinon Fruitland Sand (82880) pools are Pre-Approved for Down hole Commingling per							
NMOCD CASE NO.12520, ORDER NO. R-11567 effective 04/26/2001. Although the interest owners are not identical between							
these two pools, this same order established approval for subsequent applications for the down hole commingling of production in							
wellbores within the Gallegos Canyon Unit without notice to the unit interest owners, therefore, no additional notification is required							
prior to down hole commingling approval.							
Production is proposed to be allocated based on a fixed percentage rate. As is our intent to complete into the FC, isolate perfs with a							
CIBP and complete into the FS. V	CIBP and complete into the FS. We will run a 30-day test (or longer) to establish a stabilized rate of production for the Fruitland						
Sand. We will then drill out the CIBP, run a combined flow test of both zones and subtract the established rate for the FS to determine							
the rate for the FC. Commingling Production Downhole in the subject well from the proposed pools will not reduce the value of the total remaining production.							
I hereby certify that the information above is true and complete to the best of my knowledge and belief.
