13. Describe Proposed or Completed Operation (clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recompleate horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports shall be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompleation in a new interval, a Form 3160-4 shall be filed once testing has been completed. Final Abandonment Notices shall be filed only after all requirements, including reclamation, have been completed, and the operator has determined that the final site is ready for final inspection.)

Plans are to add the Pictured Cliffs interval to the existing Mesaverde well and then commingle production from both zones per Order 11187. Production will be reported using the subtraction method for the first twelve months after the commingling, then we will convert to the ratio method for the life of the well. Brief details of the procedure we will use are as follows:

MIRU. COOH w/production tubing. Isolate existing Mesaverde interval with a bridge plug. Pressure test the casing and remediate if the casing fails pressure test. Run GR/CCL/CBL and remediate with cement if the interval completing isn't adequately covered. Perforate and stimulate the Pictured Cliffs. Remove bridge plug and return well to production with the Mesaverde and the Pictured Cliffs commingled.

Apply w/Perm C103 for DHC.
