13. Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)*

Plans are to add Lewis Shale pay to the existing Mesaverde interval and then add the Pictured Cliffs interval and then commingle production from both zones per Order #R-10771. The individual well commingling application will be filed and approved before actual commingling occurs. Plans are to have this work completed before year's end and return this well to production. Brief details of the procedure we will use are as follows:

MIRU. COOH w/1-1/4" tubing. Cleanout to TD. Isolate existing Mesaverde perfs with bridge plug. PT casing. If casing fails test - isolate failure. Remediate with cement. Run GR/CCL/CBL from plug to surface. Perforate Lewis Shale, stimulate and cleanout.

Set 7" CIBP @ 4612'. Perforate Pictured Cliffs, stimulate and cleanout. COOH w/packers. RIH w/2-3/8" tubing and land @ mid perf of PC. Flow test the Pictured Cliffs for three months.
